[National] Administrative Measures for Livestreaming Marketing (for Trial Implementation) (released on April 23, 2021 and will be effective on May 25, 2021)

The Measures require that livestreaming marketing platforms should establish and improve mechanisms and measures, such as registration and cancellation of account and livestreaming marketing function, information security management, marketing behavior specifications, minor protection, consumer rights protection, personal information protection, network and data security management, etc.

[National] National Standard Information Security Technology - Security Requirements of Facial Recognition Data (Draft released for public comments on April 23, 2021)

The Draft mainly stipulates the basic security requirements, security processing requirements and security management requirements of facial recognition data. For example, security measures should be taken to ensure the rights of data subjects, including but not limited to obtaining information about facial recognition data usage status, withdrawal of authorization, deregistration of accounts, complaining and timely response, etc.

[National] MEE to Strengthen Management of Positive List of Ecological Environment Supervision and Law Enforcement.

The Ministry of Ecology and Environment (the "MEE") issued on April 23, 2021 the Guidelines on Strengthening Positive List Management of Ecological Environment Supervision and Law Enforcement and Promoting Differentiated Law Enforcement and Supervision (the "Guidelines"). The Guidelines require tight management on the positive list.

According to the Guidelines, provincial environment regulators should adjust and optimize the eligibility conditions for local companies to be added to the positive list, and municipal regulators should remove disqualified companies out of the list. Companies with serious violations of environmental laws must not be added to the list. The positive list should have a term of validity of three years, and municipal regulators should conduct at least one on-site inspection during the term, and instruct the companies to improve environmental management.
